

Plot the top 10 most common locations that include the yearly salary data.  
Plot this as a bar graph for the average salary

Data Analyst

The bar plot displays the top 10 locations by mean yearly salary, highlighting the geographic areas where job listings with yearly salary data tend to offer the highest average annual salaries. This analysis provides critical insights for job seekers and professionals looking to understand which locations might offer more lucrative opportunities, especially within fields related to data analysis and related sectors.

The visualization underscores the importance of location in determining salary expectations and can help inform decisions related to relocation, remote work opportunities, or targeting job searches in specific markets known for higher compensation levels. [\[>-\]](#)
